ADDERLink™ INFINITY 100T

ZeroU™ IP-based high performance KVM for extension/matrix of video, audio and USB over a single cable

Features

ZeroU™ size

The ADDERLink™ INFINITY 100T (ALIF100T) takes ZeroU™ of rack space in the server room allowing for ultimate flexibility and ease of installation.

IP-based

Use your existing networking infrastructure to extend or matrix your computing resources to your users.

USB powered

The device can be powered from USB. This means there is no need to provision for an external PSU. Options for powering from an external PSU or redundant PSU are also available.

Low power consumption

Requiring less than 3 Watts, the unit can be powered from USB. This means it could use less than a quarter of the energy when compared to other solutions.

Multiple video options

The system supports resolutions to a maximum of 1920x1200 @60Hz through either DVI, display port and VGA interfaces.

USB2.0

Enables you to connect any USB human interface device from mice and keyboards through to graphics tablets, jog shuttles, joysticks and 3D explorers.

Seamless integration with the ADDERLink™ INFINITY range

The ALIF100T can integrate seamlessly into your existing ADDERLink™ INFINITY setup, replacing or working in conjunction with your existing ALIF endpoints.

Perfect digital video

The ALIF100T uses an encoding system that is spatially-lossless, with 1:1 pixel mapping, so the digital video you receive is the same as the digital video leaving the remote computer ensuring the very best picture available and colour accuracy.

USB audio

The system delivers USB stereo audio (Line In, Line Out) digitally across the network.

EDID management

The system has intelligent EDID management to either allow the true characteristics of the monitor to be passed back to the computer, or controlled resolutions to be imposed.

Digital KVM matrix

By the addition of the ADDERLink™ INFINITY Manager (AIM) you can turn multiple point-to-point extenders into a matrix system that allows any workstation to connect to any computer connected to the network. See the AIM data sheet for details.
